

How to construct your Windmill

- plastic windmill sheet
- wooden batten (approx 3 x 2cm), 120cm or more tall
- 6 or 8 cm nail
- rubber or cork to act as a washer

Instructions

Pick up each corner of the plastic in turn, bend it forward over the middle and pass the nail down through the hole in the corner.

You should end up with the nail going through all 4 corners, pointing down at the hole in the centre.

Slide the piece of rubber or cork onto the nail, then pass the nail through the centre hole and hammer it into your wooden post.

Please keep your windmill for next year's Art On The Hill!
